

Logistics

The new order management solution by Gurtam

HTML

Single service for the office and the field

Unite dispatchers and mobile employees by means of a universal service to control all stages of delivery and field services operations.

Web-version for dispatchers

Mobile app for drivers

Performing a wide range of tasks in the area of Logistics and distribution

Cost saving;

Transportation arrangements;

Transport processes optimization.

Logistics

Web-version

Easier way to manage
delivery processes

Four stages of order management

ADD ORDERS

DISTRIBUTE ORDERS

MONITOR A DELIVERY

GENERATE REPORTS

ORDERS

Add, plan and distribute orders

Optimize routes based on data from Google Maps

Manage delivery processes

The screenshot displays a logistics management software interface. On the left, a sidebar menu includes options like 'Logistics', 'PLANNING', 'NEW ORDER', 'IMPORT ORDERS', 'ROUTES', 'REPORTS', and 'CHAT'. The main area is divided into several sections:

- New order form:** Contains fields for 'Order name', 'Type', 'Client', 'Address', 'Volume', 'Vehicle type', and 'Comments'. It also includes a 'CLIENT' section with 'Comments', 'Phone 1', 'Phone 2', and 'Email', and an 'ATTACH FILE' section with a 'UPLOAD' button.
- Map:** A Google Map showing the geographical context of the orders.
- Orders Table:** A table listing various orders with columns for Name, Address, Delivery interval, Unloading time, Comments, Cost, Weight, Volume, Vehicle type, Phone, and Tags.
- Summary Panel:** A panel at the bottom left showing 'Orders' summary: Total weight (0 kg), Total volume (0 m3), Total cost (0 \$), and Total number of orders (0).
- Map View:** A detailed map view at the bottom right showing a route with multiple stops marked by red pins and a blue line.

Name	Address	Delivery interval	Unloading time	Comments	Cost	Weight	Volume	Vehicle type	Phone	Tags
3888888	Elm Str., 18	15 Mar 2017 08:00 - 18:00	2 min		0	0 kg	20 m3

Routing and addresses powered by 

Order placement

Maximum precise order description

Option to attach and view files

Search and filtration by core fields

Core fields:

- type (single/permanent);
- name and cost;
- address, time interval and radius;
- item weight and volume;
- client information (name, phone number, e-mail);
- characteristics and product description;
- vehicle type;
- unloading time.

IMPORT

of orders in Logistics

99+1 orders in
one click

Import option

for the companies utilizing third-party accounting systems for order list generation.

Simple importing:

1. Read data from .csv/.xlsx files;
2. Analyze and review pre-distributed orders;
3. Edit selected order information or use multiple editing option;
4. Benefit from order templates to save time on import and arrange orders more efficiently.

ROUTE PLANNING

in Logistics

Three steps towards
optimized routes

Simple process of planning

1 **Select**
orders

2 **Select**
vehicles

3 **Check**
preliminary order
distribution

General information on the selected route

Ample pre-setting options

The screenshot shows a settings page with four tabs: GENERAL, WAREHOUSES, PLANNING, and NOTIFICATIONS. The GENERAL tab is active. It contains several sections:

- RESOURCE**: A dropdown menu with the value "shiv".
- MAP PROVIDER**: A list of providers: Gurtam, Google, and Yandex. A red box highlights this section, with a callout stating "Addresses and routing powered by Google".
- ORDER PARAMETERS**: A table of parameters for new orders:

Time from:	Time to:
11:00	12:01
Advance time, min:	Unloading time, min:
0	0
Radius, m:	Weight, kg:
61	0.0003
Volume:	Route color:
0	From unit properties
- IMPORT ORDERS**:
 - Date and time format: dd.MM.yyyy HH:mm:ss
 - Separators: ;
 - Notification method: Phone 1, Phone 2, E-mail
- UNITS OF MEASUREMENT**:
 - Cost: \$
 - Effective capacity: m3

A callout "Other presets" points to the UNITS OF MEASUREMENT section. A "SAVE" button is located at the bottom right.

Key benefits

- Routing and addresses based on data from Google Maps
- Effective “dispatcher-driver-client” communication pattern;
- Precise order information to avoid misdirected orders;
- Preliminary analysis of key performance indicators;
- Option to view files attached to the order anytime and anyplace;
- Import option for the companies utilizing third-party accounting systems for order list generation;
- Time and cost savings due to relevant order distribution across delivery areas attributed to warehouses;
- Default settings for new orders;
- Automatic order distribution based on relevant criteria;
- Option to adjust a preliminary route;
- Time saving for the office and the field due to automatic route sheet creation;

Key benefits

- Custom tags to mark orders and sort or attribute them to warehouses by given properties;
- Single and Permanent order types for occasional and regular deliveries;
- Filtration by type, time interval, warehouses and tags to prompt order selection;
- Flexible notifications for customers, dispatchers and couriers with a comprehensive HTML editor;
- Option to compare planned and actual routes to check courier performance in real-time mode;
- Route export in .pdf and .xlsx.
- Drag & drop to customize report tables and statistics;
- Temperature information in reports for those businesses engaged in refrigerated transportations;
- Comprehensive analysis of performance characteristics based on order reports;
- Reports for groups of elements with a detalization (routes+orders) or without it (routes only);
- Chat with a driver and an option to send photos.

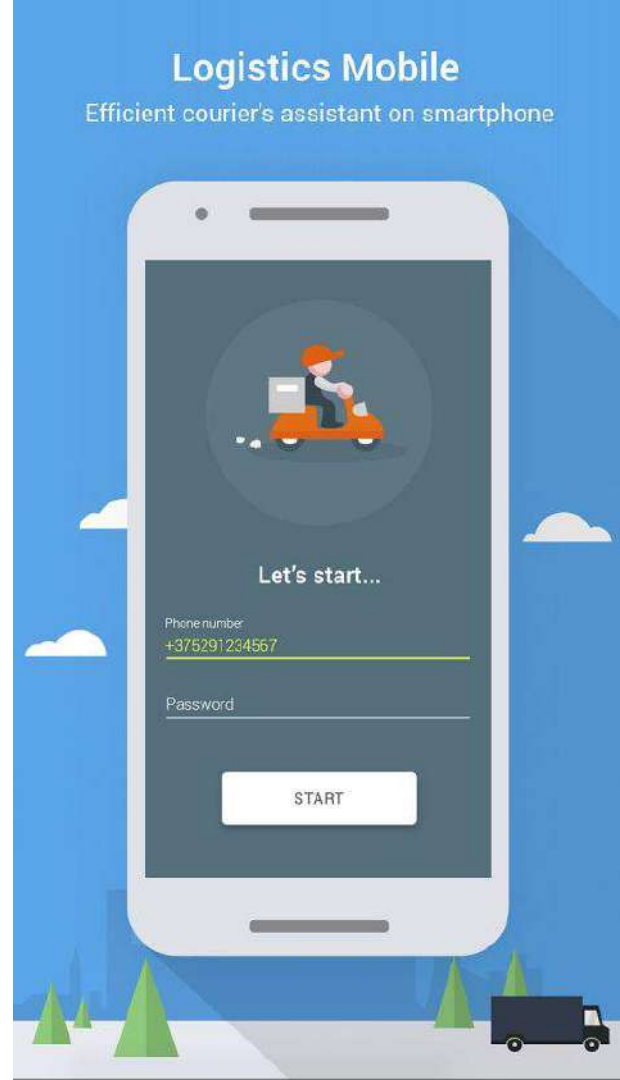

Logistics

Mobile version

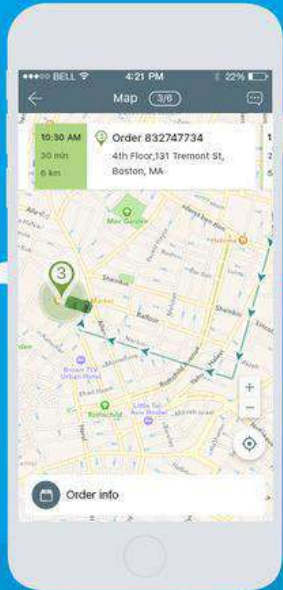

For delivery men and
other mobile
employees

First steps:

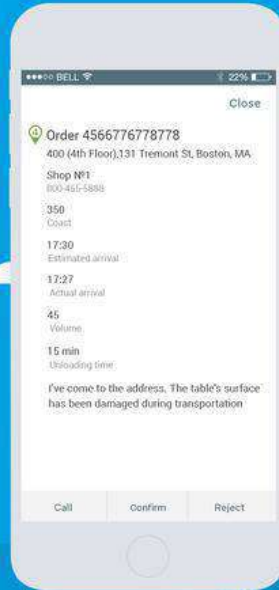

1. Create a driver in the tracking system and bind him to a unit
2. Enter driver's phone number to start authorization procedure
3. Check driver's binding to a unit

Your route
is always at hand

Any questions concerning orders?
See detailed info

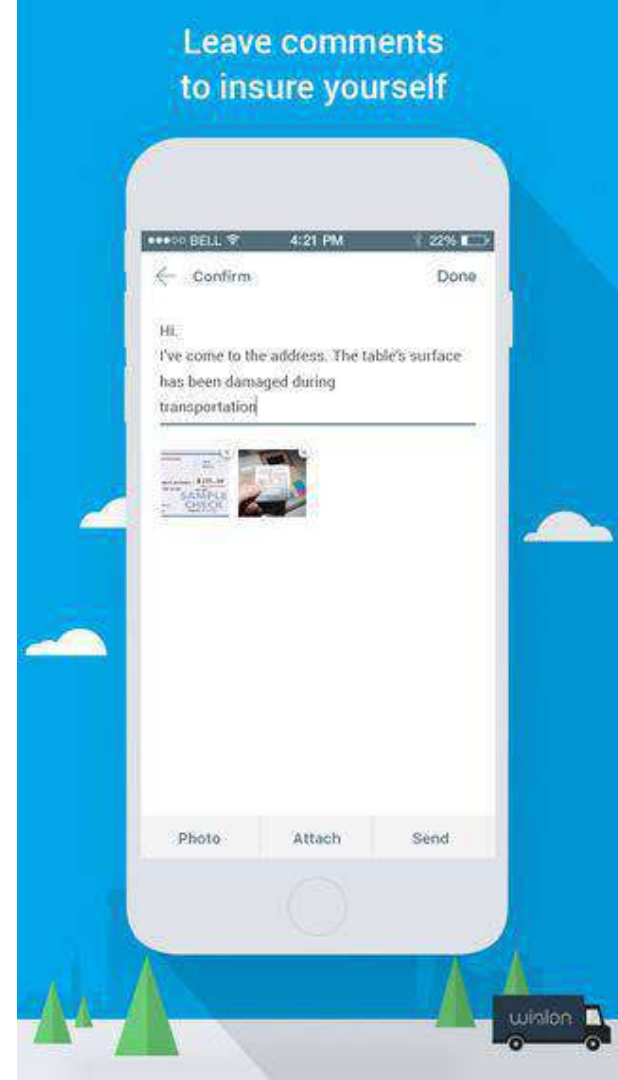

1 Enjoy quick access to order information and visualization on the map.

2 Get relevant information on your whereabouts, distance to the point and delivery progress.

Effective communication:

1. Notify dispatchers of confirmed deliveries or rejected orders.
2. Send photos and comments concerning the delivery process.
3. Deal with clients on the phone.

Key benefits

- Tablet version to simultaneously view order in a table form and on the map;
- Push-notifications to keep couriers informed;
- Quick connection with clients and dispatchers;
- Option to attach a photo with a customer signature, name and information on delivery date/time;
- Single vehicle or whole route visualization;
- Multiple map layers and photo quality selection;
- Options to review orders for the specified period and switch between routes;
- American and British Imperial measurements support;
- Software tracker functionality embedded.

**Thank you for
watching**
